

Virginia Automotive Association Auto Technician Training

"Digital Scope Usage"

Who is this class for? Every tech that uses a scope, or wants to needs this class!

We will use simulators and live vehicles to show how to get the pictures needed to diagnose today's electronic nightmares. Your tech will learn and perform the following: * Using a scope to test and define auto circuits. * What are "Signatures" of sensor circuits, *Measure circuit current (Amp Ramping), * how to test circuit quickly instead of using trouble charts, *Checking COP coils with current probes, *Finding a bad crank/cam sensor with frequency, * *Secondary Ignition quick check.

This class will be taught by Bill Mays, VAA Automotive Technician instructor. Class size is very limited - first come, first serve. Register today!

Questions: call Bill Ferguson at 804-305-6679 or wfferguson@vaautomotive.org
