

For this reason Task Master tractors have the features you need to do the job. Features like power steering so you can maneuver with ease. Multiple range transmissions so you can find the perfect amount of power or speed range. Standard PTO shaft and 3-point hitch allows common implements to work. Rear wheel differential lock is standard for when you really need that extra traction. Certified roll over protection structure (ROPS) for your protection. These features and more turn power into performance.

Dependable

In most of the world when a tractor is not in use in the fields, it is connected to a wagon and used for personal or product transportation. In these other countries tractor owners do not have repair services readily available. The nearest repair shop may be hundreds

Of miles away. There, tractors must run every day for years with just basic maintenance. The manufacturers of these tractors, with their clean, modern and efficient factories, were contracted to produce Task Master tractors. Dependability is our middle name.

Made for America

Task Master tractors were designed for American use and are manufactured for America, using our unique specifications. Task Master tractors meet or exceed OSHA safety requirements.

When it comes to durability and value, nothing beats the Task Master. Check out the twelve (12) month limited warranty, the range of features, availability of parts and affordable prices and you will agree that Task Master is the best tractor for your money.

do the
Job.

Affordable

Task Master compact tractors prove you do not have to pay a fortune for a new quality tractor. The part-time user no longer has to purchase a worn out used tractor, or some no name, no support, mail order tractor with no upgrade options. Task Master tractors are loaded with features. Compare our tractors to the competitors and you will be surprised what your money will buy. Our tractors are built to handle any task or job you want done. With models ranging from 24 to 40 horsepower, you can definitely find a model that is perfect for your needs. Our low RPM, high torque diesel engines are conservationists when it comes to fuel usage yet are very powerful when it comes to doing the work. Task Master tractors are perfect for use in agriculture, ranching, breeding, light farming, landscaping, construction, or estate maintenance.

Tough

Task Master tractors are built to last. With proper care and maintenance, they will be a loyal companion for life. Task Master tractors are heavy weights. The drive train has no aluminum, just strong, durable, long lasting steel and lots of it. Task Master tractors are built with care. They are designed to be strong, reliable, and easy to maintain and repair. Our industrial grade front end loaders are easy on / easy off. They are almost as tough as our tractors. Add a loader to your Task Master tractor and you can move dirt, waste, hay, fence posts, gravel, bark dust or whatever you want, without breaking a sweat. Don't forget to ask about tire options, we offer R4 (industrial) as well as Turf tires.

Powerful

Task Master tractors have the world's most popular brand of small diesel engines. In 1995 alone, over 3 million engines were produced. These engines are so strong, you will know our tractors have more horsepower than they actually do. Due to the heavy weight of our tractors and the high torque of the engine, you can push, pull, lift or move what other similar powered tractors cannot. Power without function is just waste.
