

FUEL SYSTEM SERVICE / GAS

PROBLEM

- Dirt, varnish, corrosion and carbon deposits build up and restrict the flow of gasoline and air to the engine.
- Fuel system deposits are a leading cause of drivability-related issues.
- Deposits can lead to poor fuel economy and increased emissions, as well as serious and costly repairs, if left unchecked.

SOLUTION

- Add Wynn's PowerCharge fuel treatment to the fuel tank.
- Wynn's Air Intake Cleaner is applied to the throttle valve and throttle body to remove deposits and add lubrication.
- Using a special machine, Wynn's V.I.C. Combustion Chamber Cleaner is delivered directly into the engine's fuel system to provide immediate cleaning of all fuel injectors, intake valves and combustion chambers.
- Deposits are removed, and the fuel system is restored to like-new operating condition.

SERVICE RECOMMENDATION

Once a year or 15,000 miles.
