

POWER STEERING SERVICE

PROBLEM

- Power steering fluid deteriorates over time, resulting in varnish and sludge deposit buildup.
- Power steering systems are typically neglected, and minor problems are often ignored.
- Signs of maintenance neglect include shuddering or hard steering, especially when fluid is cold.

SOLUTION

- Using a special machine, Wynn's *Power Steering Flush* is circulated through the power steering system, dissolving harmful deposits and suspending them in the old fluid for easy removal.
- The power steering fluid flush and fill machine is then used to exchange up to 90% of the old fluid with new Wynn's *Power Steering Fluid & Conditioner*.

FEATURES/BENEFITS

- Reduces the potential for major problems or expensive repairs, as well as wear and noise.
- Wynn's *Power Steering Fluid & Conditioner*
 - Conditions and revitalizes seals to help stop and prevent leaks.
 - Resists water contamination.
 - Provides low temperature effectiveness down to -40° F/-40° C.

Dirty power steering fluid (left) can compromise the performance of the steering system and may even cause damage.

EQUIPMENT

- Wynn's *Power Steering Flush Machines*
