Trapeze Bar	Common Diagnosis			
The freestanding unit can be used over most bed styles. Trapeze bars are essential for bed-confined patients who need assistance getting in and out of bed, who need to change body position, or who need to sit up to relieve a respiratory condition. Patients generally require a Trapeze Bar to accompany the use of traction equipment. Accommodates up to 300 lbs.	897.6	Bilat. AK or BK Amputation	335.2	ALS
