# Turning Leg Caddy

## What is the Turning Leg Caddy (TLC)?

The Turning Leg Caddy (TLC) is a patient-powered knee scooter useful for mobility when the foot or ankle can not bear weight. If you cannot put weight on a foot or ankle because of injury, illness or surgery, a knee scooter may be just what you need.

The Turning Leg Caddy offers mobility necessary to remain active and independent. Knee scooters avoid underarm discomfort, balance problems and other adverse consequences of crutches and walkers.

A *Turning Leg Caddy* allows you to:

- Return to normal activity quickly
- Avoid injury to wrist, arm & shoulders from crutches
- Use of your hands freely when in a parked position
- Protect your injured foot/ankle
- Have maximum mobility

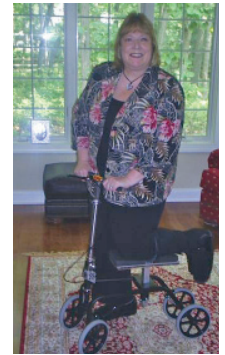

A *Turning Leg Caddy* is for:

- People with foot or ankle injuries
- Individuals having foot / ankle surgery
- Diabetics with Charcot joint disease, ulcers or other complications
- Patients with bunionectomies, achillies tendon problems, or foot reconstruction
- Clients with neuromuscular problems, arthritis, or amputations

## Why Choose the Turning Leg Caddy?

*The "BEST" of knee scooters...*

- Meets doctors' requirements for 'total non-weight bearing'
- Easily adjustable to patient heights
- Available in two sizes for patients from 4'11" to 5'8" and 5'9" to 6'6" tall
- Easily adjustable from left to right ankle
- Accommodates weight up to 350 lbs
- Easy Front steering allows for most effective maneuverability and stability
- Helps transport the user over uneven surfaces and slight inclines
- Large 8" wheels help you maneuver over curbs or steps up to 6"
- Parking brake allows you to stay put and complete daily activities (such as food preparation, personal care)
- Lightweight and foldable for easy transportation and storage
