Casemet, Bay and Bow Windows

by Dove Vinyl Windows

Casement/Awning Windows

Casement windows from Dove Vinyl Windows are an unbeatable combination of beauty, versatility and high performance. This is one of the finest engineered casements available anywhere. Our custom-sized units are designed and built for year-round comfort and long-lasting performance.

Features and Benefits

Glass Options

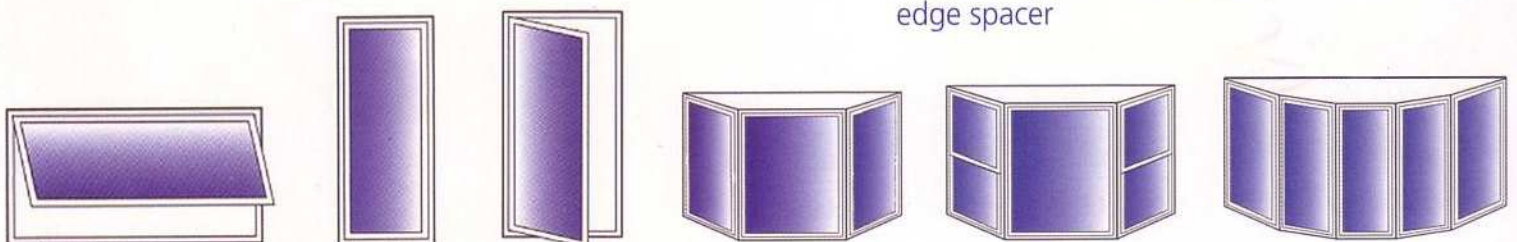

We offer the best warm edge technology. Our windows meet today's ENERGY STAR® standards when ordered with optional Low-E glass and argon gas.

Grid Options

- Flat
- Brass Slimline
- Contoured
- Fashion Glass™

- Fusion welded sash and frame for strength and durability
- Attractive, exterior beveled design
- Specially designed screw bosses and well-placed interior walls for exceptional hardware securement
- High Performance - Achieves a rating of C-40
- Integral screen pocket in the frame for easy screen removal or replacement
- Recessed sash design significantly reduces the amount of water around the perimeter of the sash
- One-inch triple pane glass available
- Standard options contain Duraseal™, a warm edge spacer designed with insulating pillows of air to further increase energy efficiency
- Upgrades include Duralite™, the industry's most energy-efficient, third-generation warm edge spacer

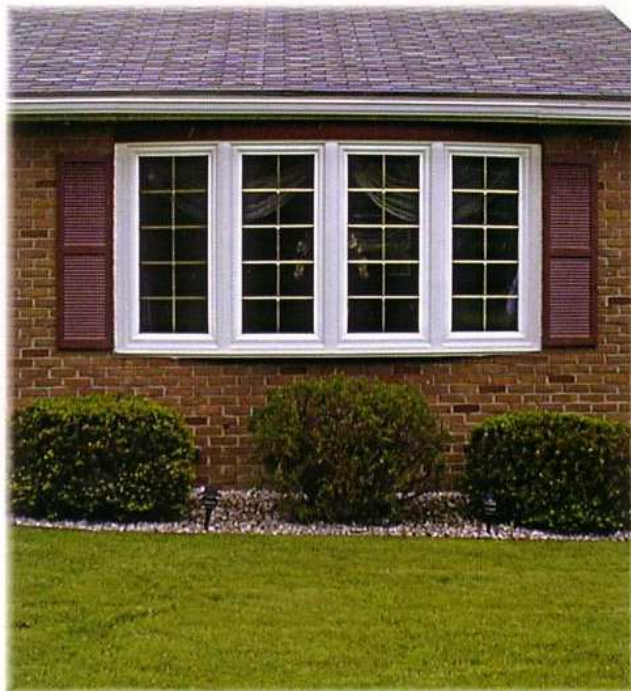

Bay and Bow Windows

Add a breathtaking dimension to your home with a bay or bow window unit. If you can dream it, we can build it.

Bay windows feature a large center picture unit with your choice of double hungs or casements on the sides. All units come standard with a furniture grade oak or birch interior seat board. They are custom sized for your opening and available in almost unlimited projections.

Bow windows feature a beautifully graduated, curved shape and include three, four or five equal sized window units with double hungs or casements. Choice of venting or fixed windows is completely yours.

ENERGY-EFFICIENT GREEN WINDOWS

DURA PLATFORM SPACERS

Better-insulating glass spacers can improve a window's energy efficiency by up to 10 percent. Envirosealed Windows are made with Dura Platform spacers, providing homes with unsurpassed heating and cooling energy savings.

This, in turn, reduces the amount of CO₂ created and your impact on the environment. Dura Platform spacers consist of the most thermally efficient components, each of which plays an important role in improving energy efficiency.

- Structural Spacer Choices – Duraseal with aluminum is a second-generation technology that has superior thermal efficiency; Duralite contains NO METAL but uses a polycarbonate spacer element, making it the most thermally efficient spacer available
- Insulating Chambers – Pillows of air reduce energy loss through the spacer
- Three-Sided Continuous Moisture Barrier – Impermeable to gas and water vapor
- Bondline Adhesive – Durable, moisture resistant adhesive for prolonged UV and water exposure
- Encapsulated Dessicant – Protected layer of concentrated dessicant to prolong unit life

ENERGY-EFFICIENT GREEN WINDOWS

Envirosealed Windows™ by Dove are energy-efficient, green windows. Their superior thermal efficiency allows homeowners to lower their energy bills and save money. But more importantly, their efficiency guarantees lower CO₂ emissions and a more positive impact on the environment.

In order to understand what makes Envirosealed Windows so great you have to understand the window spacer system inside.

The better the spacer the better the window, and Envirosealed Windows by Dove use the best spacers in the business.

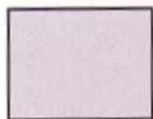

Standard Features

- 1-inch hardwood, cabinet-grade veneer head and seat board
- Each window or vent unit individually framed for superior strength
- Unique sill weep system keeps the weather out and is worry free
- Insulated with fiberglass between window units

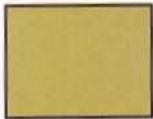

Upgrade Options

- Custom-sized, hip roof packages
- Copper roof kits
- Prefabricated, insulated seat boards
- Interior low-voltage light kit
- Edge banding for a finished look
- Knee braces
- All-wood interior finish trim
