

Mid-Life Rehab Kits for Bus HVAC

Revitalize HVAC systems on 5-7 year old buses

Are Your Buses 5-7 Years Old?

We'll combine your fleet experiences with our HVAC industry knowledge to create innovative ideas on how to keep your bus HVAC systems operating at peak performance for the last half of their lives.

Save time and money with Thermo King Rehab Kits

- **CREATING THE KIT WITH THERMO KING EXPERTISE** - We'll work together to create a list of key parts that you'll need to maximize the life and performance of your HVAC systems and bundle those parts in a convenient kit, including any technology upgrades that have been made.
- **BIG SAVINGS** - By ordering a kitted group of Genuine Thermo King parts, you'll enjoy considerable savings over buying the parts individually.
- **MINIMAL INVENTORY** - Logistically, it's easier to store and handle kits rather than individual parts, and your local Thermo King dealer can stage your kits and deliver them to you as needed.
- **DEALER INSTALLATION SUPPORT** - If you need help with all or some of the installation, your Thermo King dealer is standing by.
- **GENUINE THERMO KING PARTS** - Best of all, you'll be using Genuine Thermo King parts which are specifically made for the rigors of transit HVAC applications.
- **PREDICTABLE MAINTENANCE COST** - We can also offer you a long term maintenance program to make sure your buses stay on their routes and out of the garage, allowing you to remove cost and budget uncertainties.
- **US GOVERNMENT STIMULUS DOLLARS** - It's possible that you will be able to apply governmental stimulus dollars for programs such as this - check the details of the program for confirmation.

Delivering performance, convenience and simplicity!
