major tasks

### Espar's AIRTRONIC air heaters

Espar's air heaters are independent of both the engine and of the vehicle's own heat balance.

They draw in cool room or outside air, heat this up and then deliver it to the interior of the vehicle.

Air heaters are an excellent solution for commercial vehicles of every type. They can be installed just as well in the cab as in the luggage compartment or under the floor.

Practical controls - such as a digital Espar timer - make your comfort perfect.

### The comprehensive Espar's product line

**AIRTRONIC and HYDRONIC air heaters and water heaters:** These are the two heater technologies that Espar offers and which cover a wide range of different areas of application.

The **controls** make it child's play to enjoy optimum cozy warmth right from the start.

luggage compartment and

### Espar's HYDRONIC coolant heaters

Espar's coolant heaters work independently of the engine and thus offer a double plus: pre-heating the vehicle's passenger compartment and the engine.

The heaters are integrated in the cooling system of the engine. The thermal energy gained is then distributed through the vehicle's own heat exchanger as forced hot air and this heats the interior of the vehicle via existing air vents. The engine is warmed up with the residual heat in the cooling water.

Practical controls - such as a digital Espar timer or key fobs - make for ideal and pre-heated engines and compartment space.

And the practical upgrade kit for auxiliary heaters provides full Eberspächer pre-heater comfort for low fuel consumption diesel vehicles equipped ex works with a fuel-burning auxiliary heater.

Why not learn about our wide ranging product line in detail and find your customised solution!
