

Proctonet

LIQUID

Soap substitute for ano-genital hygiene, haemorrhoids - itching

150 ml

ACTIVE INGREDIENTS

PROPERTIES

HORSE CHESTNUT, WITCH HAZEL, MALLOW

Vasotonic, vasoprotective, soothing properties.

FILMOGEN OIL

Protective action.

ALOE

Soothing, moisturising properties.

ELASTIN

Elasticising properties.

AMPHOTERIC SURFACTANTS (Coconut Oil derivatives)

Delicate and non-aggressive cleansing.

WHY IS IT USED?

A “non-alkaline” soap substitute for ano-genital hygiene.

It does not contain Soda nor Sodium Lauryl Sulphate and it is a foamy detergent extracted from coconut oil. It contains elastin with vegetable extracts of aloe vera, horse chestnut, mallow and witch hazel.

- ➔ It is suitable for the hygiene of sensitive or sensitised mucous membranes of both babies and adults;
- ➔ It is optimal for types of itching caused by dryness during the menopause;
- ➔ It is also suitable for the delicate cleansing of all bodily areas.

Proctonet

LIQUID

Soap substitute for ano-genital hygiene, haemorrhoids - itching

150 ml

ALOE VERA

Aloe vera is a mixture of over 40 different elements, amongst which there are vitamins, amino acids, enzymes, mucopolysaccharides, mineral salts, sterols, and phytosterols which carry out softening, moisturising and soothing actions.

MALLOW

It has pink-purple flowers and it belongs to the Malvacea family. It has emollient, softening, anti-inflammatory, calming, laxative, expectorant and soothing properties. It is suitable for the treatment of irritated mucous membranes, ulcers, spots, haemorrhoids, skin inflammations, sores, burns and itching.

FILMOGEN OIL

It is structurally similar to the uropigal fat which protects the feathers of aquatic birds; it confers a pleasurable softness, creating a protective film covering the treated parts.

WITCH HAZEL AND HORSE CHESTNUT

Vegetable extracts of Witch Hazel and Horse Chestnut together with vasoprotective and vasotonic properties improve the trophism of the connective tissue of blood vessels and facilitate the re-absorption of fluids and the elasticity of capillaries.
