2007 GM K1500 Crew Cab Pick Up 7" Basic and Performance System

Fabtech announces the release of their 7" Suspension systems for the new 2007 GM 1500 Pick Ups. Starting with their industry leading crossmember and spindle technology, Fabtech pushes the envelope with superior ride height to properly clear 35" tall tires. Extensive design work was given to the extended length steering knuckles to keep the track width near stock with superior turning radius for maneuverability in tight spots. Lower control arm crossmembers are strengthened with cross tubes backed up by tubular frame struts to distribute front suspension impact loads. The front differential is protected with a tightly formed 1/4" thick steel skid plate. Rear suspension lift is accomplished via a block and add a leaf system.

With two systems available, the Basic system features all the above componentry with a front coilover spacer system utilizing the factory coilover assembly for a stock like ride. The Performance system also offers the same componentry but with an upgrade to the Dirt Logic 2.5 Adjustable Coilover shock in place of the factory front coilover assembly. Rear shock options include Performance shocks or Dirt Logic 2.25 shocks. Both systems are compatible with GM Stabilitrak® models.

/// 2007 GM K1500 Crew Cab 5.3 Auto P/U non Autoride (T900 Platform Only) ///

7" Basic System
KIT # K1024

Qty.	Part Number	Description	UPC Code	Jobber	Jobber Ext
1	FTS21040BK	Component Box 1	674866019379	728.00	728.00

2	FTS81056	Dirt Logic 2.25 non Resi	674866019652	222.00	444.00
					3,025.00

/// FEATURES AND BENEFITS ///

- Integrated Lower Control Arm Crossmembers with Differential Skid Plate included
- Offset Ductile Steering knuckles retain stock like turning radius with minimal track width change
- Includes crossmember cross tubes and impact struts to distribute front suspension impact loads through frame
- No disassembly of factory coilover assembly required for installation
- Systems compatible with factory Stabilitrak® models
- Rack and Pinion is retained in stock position

/// Systems Available ///

Basic system utilizes OE front strut assembly for a stock like ride

Performance system with Dirt Logic 2.5 provides superior on and offroad dampening

/// INSTALLATION & SPECIAL REQUIREMENTS ///

Install time- 3-4 hours

Welding required- No

Holes to drill- 3

Driveshaft modification- No

Brake system modification- No

Tire- 35/1250R17

Wheel- 17 x 8 w/ 5" BS
