FEATURING **MX2.75C**

Pro Comp Coil Overs— Developed using race technology learned from over 20 years experience in off-road racing. Machined, assembled and tested exclusively in-house to exacting standards.

Monotube Design

Thick wall drawn over mandrel tube with a burnished finish on the ID. Burnishing provides a superior finish by compacting the surface molecules together. This process eliminates porosity normally found in honed tubes. Internal seal life is multiplied 3-4 times over honing. Increased wall thickness maintains concentricity under heavy load and accelerated thermal changes.

Piston Assembly

Sintered piston made from proprietary metal alloy - One-piece aerospace grade friction ring is graphite and Teflon impregnated - heat and abrasion resistant - Individual compression and rebound valving specific to your vehicle

Rod

105,000 PSI induction hardened and hand chromed steel provides the rigidity for accurate alignment of rod seals for extended service without premature oil leakage.

Oil

High-grade race quality lubricant resists foaming and thermal breakdown.

Eyelet

TIG welded alloy steel with a clear zinc finish. Teflon lined 4130 spherical bearing on both mounting ends.

Coil

Computer designed, hot wound, shot peened, factory preset, powder coated will provide excellent ride quality on and off road.

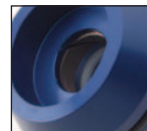

Build

300-PSI nitrogen stabilized units. Assembled on Pro Comp proprietary machines an industry exclusive. Design is Pro Comp's coil over shocks without the Schrader valve common to the competition. Nitrogen pressure reduction (leakage) is virtually eliminated.

Sealing o-rings are viton and doubled throughout for redundancy.

Aluminum components are CNC machined to exacting tolerances and anodized for an excellent look and extended life span

Internal hydraulic extension stop and urethane external compression stop control the energy at either extreme.

NEW FOR 2007 Chevy Silverado!!

Chevy Silverado 6" Suspension Lift System

Experience exceptional performance and ride quality from Pro Comp Suspension. Pro Comp Suspension delivers solid performing suspension lift systems that capitalize on GM's latest chassis design that make it the ideal lift system for the Silverado.

- Stage II systems are available with MX2.75c Series coil over front shocks and MX6 adjustable rear shocks for exceptional ride comfort and handling.
- One-piece cross members and high strength extended steering knuckles install easily and preserve factory steering geometry and alignment specifications.
- Allows the use of 35" x 12.50" tires on factory 17" rims or aftermarket rims with similar width and offset.
- Approximate installation time is 6-8 hours.
- Optional Suspension Lift Systems, P/N 51017BMX or P/N 51017B will be available for extended high speed 4WD operation. These systems include differential mounts that position the front differential at the correct angle to accommodate the included CV front driveshaft.

Year	Application	Kit Type	Height	P/N	Jobber Price
2007	Silverado 4WD	Stage II	6"	51007BMX	\$3194.50
		Stage II	6"	51017BMX	\$3697.99
		Stage I	6"	51007B	\$1994.50
		Stage I	6"	51017B	\$2497.99
